Title: Paradental Anesthesia ✓

Approximately 206 feet long.

A cartoon film demonstrating a tooth in process of decay. When the nerves in the tooth are exposed two little figures appear in the nerve canal and hammer on an anvil. The injection of Hydrocane is made by way of the paradental membrane. When the solution reaches the point where the nerve enters the tooth, the little figures gradually disappear and the word *PAINLESS* appears in the nerve canal.
